

Welding machine

GYS, one of Europe's largest manufacturers of bodyshop welding equipment, has launched a new Multi-torch MIG welding machine with Brazing capability. The M3GYS Auto is a single phase welder featuring a three torch system, designed to be set up simultaneously for brazing, steel and aluminium via a Spool Gun – building on the success of the T3GYS Auto, its three phase equivalent.

It features GYS synergic control offering optimal wire speed selection and it will accommodate 1kg, 5kg and 15kg wire reels. It can be supplied as a ready to go package and is available to bodyshops through distributors nationwide. The GYS car body MIG range also includes single torch machines suitable for brazing as well as Pulse MIG machines.
