

## NEW CAR BODY RANGE FROM GYS

**GYS, the French manufacturer has launched the new 2014 Car Body Welding Systems Catalogue.**

Coinciding with the French Manufacturing Groups 50th Anniversary the new 60 page catalogue includes a wide range of Dent Pulling, Spot Welding, MIG welding equipment and many smaller tools and accessories.

### Dent Pulling

The range includes a wide range of options for Steel and Aluminium. Generators are available as either Steel or Aluminium or as a combined unit. Pulling systems are available in 3 configurations, Proliner offers a good starter system, Speedliner offers a comprehensive array of repair tools with the range being topped by GYSliner. Each system is available with a choice of power unit thus all requirements are covered.

### Spot Welding

The Catalogue includes a total of 9 Spot Welders including low cost machines from around £4,000 right up to the highest specification Spot Welders with 14,500A capability and including 'Energy Dynamic Control' the GYS fully automatic control system requiring no operator input. This system already has manufacturer approvals and offers real advantages to the Bodyshop.

### MIG Welding

The GYS MIG range includes the popular T1 and T3 GYS single torch and 3 torch machines, offering steel, aluminium and brazing functionality whenever required. Also via the GYS Synergic system set up is simple reducing operating times and an improved welding result. New to the range is the Neopulse, an inverter pulse MIG, with fully synergic control offering an ideal solution for Aluminium work.

As reported in last months issue GYS have recently announced a change in distribution strategy in the UK and on this subject Neil Pulsford, GYS UK Commercial Director said: "This year GYS have taken direct control of the distribution of the Car Body Range, supporting the product directly in the UK we are putting ourselves closer to the Bodyshop. Providing direct technical support to Bodyshops whilst working with existing suppliers to Bodyshops, enables an extension of the Supplier / Bodyshop relationship but with the added benefit of direct manufacturer support. The direct presence of GYS in the market will also provide the assurance of continuity of support for the long term and we believe lower the acquisition cost of equipment for the Bodyshop."
