

Heavy duty synergic MIG welder

THE MONOGYS full size heavy-duty synergic MIG welders are designed for where customers are limited to a single-phase supply but demand high performance characteristics and duty cycle from their purchase. Each Monogys benefits from GYS synergic technology, providing the user with automatically controlled wire speed. A manual option can also be selected. Additional advanced features include arc smoothing to deliver a superior welding result.

Monogys machines are supplied with Euro Torch and can accommodate 15kg wire reels and a full size gas bottle. At the top of the range the Monogys 250 weighs 85kg and the Monogys 200 weighs 70kg. Both machines have genuine capability to weld 1mm wire and capacitor smoothing provides a superior welding result.

MMA welding using 4mm electrodes

THE GYSMI 151 is specifically designed for the UK market to meet the need to weld 4mm electrodes from a 110V supply.

It benefits from a high performance LC filter for powerful and smooth welding and will weld 4mm electrodes from 110V on a 32A plug. Weighing just 7.8kg it is portable, robust and compatible for use with generators and long extension leads.

It also offers additional features such as digital display for precise setting, hot start, anti-sticking and TIG-lift capability and is available now.

The GYSMI 151 is an addition to the existing range of 110V welding machines from GYS, which include models for MIG/MAG, TIG DC, TIG AC/DC and MMA.
